6. DESCRIPTION OF SYSTEM PROPOSED OR INSTALLED

(FOR EXAMPLE: SIZE OF PUMP, CAPACITY OF PUMP, PUMP MOTOR HORSE POWER, PIPE DIAMETER, NUMBER OF SPRINKLERS, ETC.)

Irrigation system: Gravity fed system. Intake: Concrete spring box collects water and supplies it to a drip irrigation system through a pipe mainline (about 1400 feet of 2" pipe and 600 feet of 1" pipe). The system will consist of 4 sets (about 8,500 ft of dripline, 1,700-1 gal. per hour emitters). The system should run about 24 hours every 2 to 3 weeks (about 1 acre foot).

Pond A: Existing pond which is partially filled by seepage. It is oval shaped (90 X 140 feet) and should contain about 1 acre foot of water when filled. The pond is located adjacent to a creek fed by the spring from which we request to divert water. Water will be diverted from this creek through a 2" pipe and will be allowed to overflow back into the creek through a 1 foot culvert. Ponds B and C: Small ponds with earth dam (about 1/2 acre foot of water each)

REMARKS

7. (Description, continued): Water level in small ponds will be controlled with float shut off.

Pond A is partially dug out on a hill side and has earth dikes on two sides to contain the water. Refer to attached map for locations of irrigation systems and ponds.

The drip irrigation system will be used to establish shrubs and trees for wildlife. Drip lines will be moved to water additional plantings when the initial plantings have been established.

IF 10 ACRE-FEET OR MORE OF WATER IS TO BE STORED AND/OR IF THE WATER DEPTH WILL BE 10 FEET OR MORE AT THE DEEPEST POINT, A STORAGE PERMIT MUST BE FILED IN ADDITION TO THIS PERMIT. THESE FORMS CAN BE SECURED, TOGETHER WITH INSTRUCTIONS, FROM THE DEPARTMENT OF ECOLOGY.
